Defense EF

DESCRIPTION: DEFENSE is a coating specifically formulated for protecting metal parts from rust and corrosion for long periods of time. DEFENSE EF dries to a transparent amber coating that will not crack, peel, flake or chip, and is easily removed by most cleaning solvents. DEFENSE EF adheres to most clean, dry metal surfaces. A 2 to 3 mil coating of DEFENSE EF provides indefinite protection for indoor storage, and 6 months to 1 year protection for outdoor storage. A 5 to 6 mil coating will protect materials for up to 2 years in outdoor storage. DEFENSE EF sets up to a hard, yet flexible coating in only 2 hours.

ADVANTAGES: 1) Environmentally friendly as it contains no chlorinated solvents. 2) After removal, the parts may be either painted or welded as no residue is left behind. 3) Holds up to the toughest corrosion environments, especially salt water atmospheres. 4) Provides a quick and easy way to protect parts in transit. 5) Complies with the following mil specs, Mil-C-16173D-Grade 4 and Mil-C-83933.

AREAS OF USE: For protecting all metal parts from rust and corrosion, including machined parts, dies, molds, pipe threads, casting, tools, jigs, stamped metal parts, cables, hoists, pulleys, winches, riggings, ships, dock equipment, vehicle undercoating and many other areas.

SPECIFICATIONS:

Classification	Solvent based aerosol
Color	Amber
Odor	Characteristic solvent
Flash point (concentrate)	150° F (T.C.C.)
Aerosol flammability	Flammable spray
Propellant	Hydrocarbon
Spray pattern	Directed mist
Solubility in water	0%
