BARRICADE

When applied to hard, non-porous surfaces, BARRICADE forms a sacrificial barrier that resists graffiti and any other stains from adhering to and damaging the surface. BARRICADE forms a thin non-visible film on the material surface, protecting it. After initial application on a smooth surface, simply use barricade to remove graffiti and recoat the surface at the same time. When graffiti is taken off with graffiti remover the surface underneath will be left clean and a new sacrificial coating can be applied.

Barricade also prevents staining and corrosion from urine on bathroom stalls, keeps food from staining smooth restaurant surfaces such as vinyl booths and plastic or varnished partitions, and removes hockey puck marks from Plexiglas. It works great to provide a protective coating on vinyl bus seats, school desks, lockers, counters, electrical panels, refrigerators, table tops, golf carts, etc. It may be applied to metal, vinyl, Formica, enamel, linoleum and other hard surfaces.

Saves time and labor by making graffiti and other stains easier to remove and saves money in replacement costs of permanently stained items. Helps keep facilities looking newer longer.

Apply for a protective barrier on:

- Directional signs**
- Dumpsters**
- Metal road barriers**
- Toll booth boxes**
- Equipment exteriors**
- Bus stop enclosures**
- Sneeze guards/COVID partitions**
- Restaurant vinyl booths**
- Shop area counter tops**
- Shopping mall directories**
- Restroom partitions**
- Snow removal equipment**
- School bus seats/interiors**
- Playground equipment**
- Park benches**
- Golf carts**
- Portable toilets**
- And more...**
