MUD AWAY

MUD AWAY is a concentrated liquid, intended to break-up and dissolve all types of organic and inorganic deposits that cloud up and collect in storm and sanitary sewers. MUD AWAY works on deposits of mud, silt, sand, sediment, sludge, leaves and clay so that they can be flushed through lines with normal water flow. Use of MUD AWAY will chemically break-up these clumps of hardened matter into a liquid mixture of light weight, small, fluffy particles that are easily flushed through lines. Use monthly in manholes, rainfall drain/sewer lines, and underground parking catch basins that collect sand and mud to help keep them free-flowing. The effectiveness of MUD AWAY is not altered by water hardness or temperatures above the freezing point of water. When used in conjunction with a program of regular inspection, cleaning and flushing, it helps to keep piping, wells and basins unobstructed, free-flowing and clear of deposits.

Storm Drains and Sanitary Sewers: MUD AWAY can be poured into a manhole or sewer opening at the rate of 1 gallon per 100 ft. of 1 ft. diameter pipe. Following this application, the normal flow of sewage after the next rain will wash out the loosened deposits.

Ponds and Lagoons: Two to five gallons of MUD AWAY per 1,000,000 gallons of capacity will provide a long-lasting treatment that will materially reduce muddiness in ponds and lagoons. MUD AWAY should be distributed over area proportionately; results will be seen almost immediately.

Filtration Beds: Spray MUD AWAY over filtration bed at rate of 1 quart of concentrate for each 500 to 1000 gallons of silt-filled water. If dripped into waste stream, apply sparingly at rate of 2-5 ppm. Provides economical and fast clarification. Non-toxic, will not harm fish or plant life.

Great For Use By:

- ⇒ Hospitals
- ⇒ Universities
- ⇒ Municipalities
- ⇒ Sewage treatment plants
- ⇒ Golf courses
- ⇒ And anyone with outdoor drains
- ⇒ Anyone with ponds or lagoons
