## Uratic Salt Remover

**URATIC SALT REMOVER** safely removes uratic salt buildup from drains and pipes. When urinals and toilets are used, uratic salt and uric acid settles in the trap and in a short time it solidifies, blocking drains and causing odors. Uratic salts are a crystalline substance that can bond and become as dense as concrete and can be difficult to remove. **URATIC SALT REMOVER** is a unique blend of acids, designed specifically to attack the crystallization of urine salts within plumbing systems. When used on a regular preventive maintenance schedule Uratic Salt Remover will keep drain lines from becoming blocked and odorous. If lines are already blocked, Uratic Salt Remover will dissolve crystals that are causing the blockage. By dissolving the crystals, **URATIC SALT REMOVER** helps to deodorize foul smelling urinals and clear slow moving drains. **URATIC SALT REMOVER** is safe on all plumbing, including PVC and metal pipes. In addition to adding to the drain line, use of **URATIC SALT REMOVER** to clean toilets and urinals periodically will help to eliminate foul odors, remove the uratic salt buildup on the fixture, and keep restrooms smelling clean.

Be sure to use
