## Pellet Deicer

**Areas of Use: Driveways, walkways, roads, streets, highways and more.**

**DESCRIPTION:** PELLETT DEICER pellets are a blend of calcium, sodium, potassium, and strontium chloride that generate exothermic heat to power through and dissolve ice and snow. They are non-corrosive, will not leave a residue, or kill grass, and will prevent the re-freezing of snow and water. PELLETT DEICER is effective to -25F. This powerful product will melt 46 times its weight and works much faster than rock salt. Is non-corrosive to concrete, cement, blacktop, tar, flagstone, brick and wood surfaces. Melted ice and snow will not re-freeze, even at sub zero temperatures for up to 12 hours.

For temperatures above 5°F, use ½ pound per square yard of ice. At 0°F, use 1-2 pounds. PELLETT DEICER is very easy to use, simply spread evenly over surface with scoop, shovel or mechanical spreading equipment.

**ADVANTAGES:** 1) Works immediately to melt ice, frost and snow. 2) Non-corrosive to concrete when used as directed. 3) Effective in temperatures as low as -25°F. 4) Generates exothermic heat to power through thick deposits. 5) Prevents refreezing.

### SPECIFICATIONS:

Classification	Solid
Color	White granules
Odor	Odorless
Boiling point	No data
Solubility in water	Soluble
